# CRYSTAL SIGN

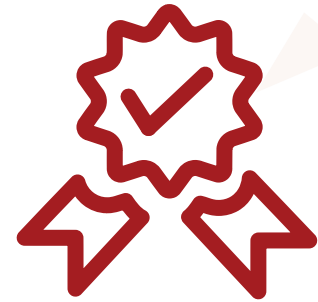

## Wide format digital printing at its best

Crystal Sign is the daughter company of the long running Crystal Graphics (PTY) Ltd (which has been operational since the 1980s). This particular division, which specialises in the production of professional signage solutions, was introduced in November 2012. We started off in a very limited capacity and have since grown into a reputable and well established business with a strong client base.

We imported and installed two top of the range Mimaki wide format digital printing machines which have the capability to print and cut media up to 1.6m wide. These machines can print on many different types of media involved in signage production, including vinyl and banner materials. We have also installed a laminating machine which enables us to offer the option of laminating vinyl with a clear UV protective film.

Being a signage company means we must have the capacity to fabricate all nature of signs - up to billboard size in some cases - so importantly we employ skilled metal workers and fabricate all steel signage at our premises. We also have a crew of specialists who can be sent out to install signs on site if our clients require the need.

At Crystal Sign we maintain a committed work ethic, and our main focus is on producing a quality product. All the members of the Crystal Sign family are hard working, dedicated individuals, who together, make up our expert team.

quality service

fast turnaround

affordable prices
